

Surveillance and Control of Infectious Diseases
Surveillance of Infectious Diseases

1. Introduction
2. Objectives
3. Scope
4. Definitions
5. Reporting System
6. Data Management
7. Data Analysis
8. Reporting and Dissemination
9. Evaluation
10. Annexes

The purpose of this manual is to provide a clear and concise guide for the surveillance and control of infectious diseases. It covers the entire process from data collection to analysis and reporting. The manual is intended for use by health workers at all levels, from the community level to the national level.

This manual is organized into ten chapters. Chapter 1 provides an overview of the surveillance and control system. Chapter 2 discusses the objectives of the system. Chapter 3 defines the scope of the system. Chapter 4 provides definitions of key terms. Chapter 5 describes the reporting system. Chapter 6 discusses data management. Chapter 7 discusses data analysis. Chapter 8 describes the reporting and dissemination process. Chapter 9 discusses the evaluation process. Chapter 10 contains annexes.

The surveillance and control system is a key component of the public health system. It provides the data needed to identify and control outbreaks of infectious diseases. The system is based on a network of health workers who report cases of infectious diseases to their supervisors. The data is then analyzed and reported to the national level.
